Notes

Tariff Arrangement Variation Formula:

$$RT_n = RT_{n-1} \times \left(\frac{CPI_{n-1}}{CPI_{n-2}} \right)$$

where:

CPI means the Consumer Price Index (All Groups - Weighted Average Eight Capital Cities) published quarterly by the Australian Statistician;

CPI_{n-1} means the value of the average of the CPIs for the four quarters to December in Year n-1;

CPI_{n-2} means the value of the average of the CPIs for the four quarters to December in Year n-2;

Applying the formula in the Access Arrangement, the CPI figures used to calculate the average of the CPI for the four quarters to December 2023 and December 2024 are the CPI (All Groups – Weighted Average Eight Capital Cities) as published by the Australian Bureau of Statistics:

CPI Calculation	March	June	September	December	Average
CPI _{n-1}	137.4	138.8	139.1	139.4	138.675
CPI _{n-2}	132.6	133.7	135.3	136.1	134.425

If the year-on-year change in the Consumer Price Index (Average of Eight Capital Cities) is negative then the Tariffs in the above table will remain unchanged for that year.
